wife and two great kids. Until very recently, I was a well-respected and financially successful trial attorney. I was also a man who was comfortable with his religion. I preferred it served at arm's length from the pulpit on Sunday morning. And would rather not discuss it the rest of the week. The circumstances that led me to write A HIGHER COURT changed all that. The entire experience was both bizarre and unavoidable. You see, I was summoned to

serve as a juror in an improbable trial -- a trial to determine whether God exists. I know. You think that sounds ludicrous. I did, too . . . until the trial began. Witnesses buried me under mountains of scientific evidence. My own eyes forced me to confront the reality of extreme human suffering. God seemed less and less relevant -- even absent -- as the trial progressed. At the close of the trial, I had to render my verdict -- "God" or "No God." Affirm

a new and deeper faith in a Creator, or confess the triumph of science. A HIGHER COURT is the story of how I discovered my ultimate truth. If your mind is open, you can join me in this journey of self-discovery. Come along. You won't be sorry.

The continuously increasing human population, has resulted in a huge demand for processed and packaged foods. As a result of this demand, large amounts of water, air, electricity and fuel are consumed on a daily basis for food processing, transportation and preservation purposes. Although not one of the most heavily polluting, the food industry does contribute to the increase in volume of waste produced as well as to the energy expended to do so. For the first time, nine separate food

industry categories are thoroughly investigated in Waste Management for the Food Industries in an effort to help combat this already acute problem. The current state of environmental management systems is described, offering comparisons of global legislation rarely found in other resources. An extensive review of commercial equipment, including advantages and disadvantages per employed waste management technique, offers a unique perspective for any academic, student, professional, and/or

consultant in the food, agriculture and environmental industries.
